

**ADVERBS**

1. **Visibility depends \_\_\_\_\_ upon the concentration of water or dust particles in the air.**

- A) rapidly                      B) obstinately      C) instantly  
D) suitably                      E) chiefly

2. **Iodine remains a mysterious substance; and ----, the iodine in the sea is in a constant state of chemical change.**

- A) comprehensively      B) comparably      C) conditionally  
D) apparently              E) excessively

3. **During the 1960s the agronomist and food technologist Norman Borlaug launched what was called "the Green Revolution", which ---- reduced hunger in underdeveloped countries, by creating high-yielding varieties of wheat and rice.**

- A) diversely                      B) plausibly              C) currently  
D) adversely                      E) greatly

4. **The local officials had ---- wanted a steel bridge to span the river, but finally agreed to a reinforced concrete one.**

- A) nearly                      B) initially              C) fairly  
D) fully                      E) completely

5. **The point-and-click actions of the computer mouse have made it an ---- popular alternative to keyboard and text-based commands.**

- A) increasingly              B) assertively              C) effortlessly  
D) exactly                      E) objectively

6. **Africa's deserts are spreading ---- owing to cycles of drought together with over-farming and overgrazing.**

- A) influentially              B) successfully              C) fundamentally  
D) continuously              E) conveniently

7. **Wouldn't it be wonderful if science and scientists were taken more ---- in the political process?**

- A) sullenly                      B) seriously              C) satisfactorily  
D) ingeniously              E) pretentiously

8. **In the opinion of most scientists, engineering does not ---- offer universally acceptable solutions.**

- A) randomly                      B) previously              C) necessarily  
D) excessively                      E) extremely

9. **No model is ever perfect, and scientists are ---- trying to refine their models.**

- A) uniformly                      B) formerly              C) mentally  
D) constantly                      E) equally

10. **The probable resources of petroleum cannot be estimated as ---- as can those of coal.**

- A) considerably              B) ultimately              C) essentially  
D) suitably                      E) accurately

11. **I couldn't follow the section on quantum computers, but the rest is ---- easy to understand.**

- A) comparatively              B) permanently              C) consequently  
D) sensibly                      E) comprehensibly

12. **Researchers attending the World Water Forum in Kyoto last year argued that collecting and using water more ---- would lessen the need for more dams.**

- A) efficiently                      B) plentifully              C) wastefully  
D) remarkably                      E) speedily

13. **At times during the last Ice Age the North Atlantic thermohaline circulation was ---- weaker than it is today.**

- A) pleasantly                      B) rarely                      C) considerably  
D) directly                      E) fully

14. **However incredible we may now find it, engineers did not ---- welcome the idea of a general purpose microchip.**

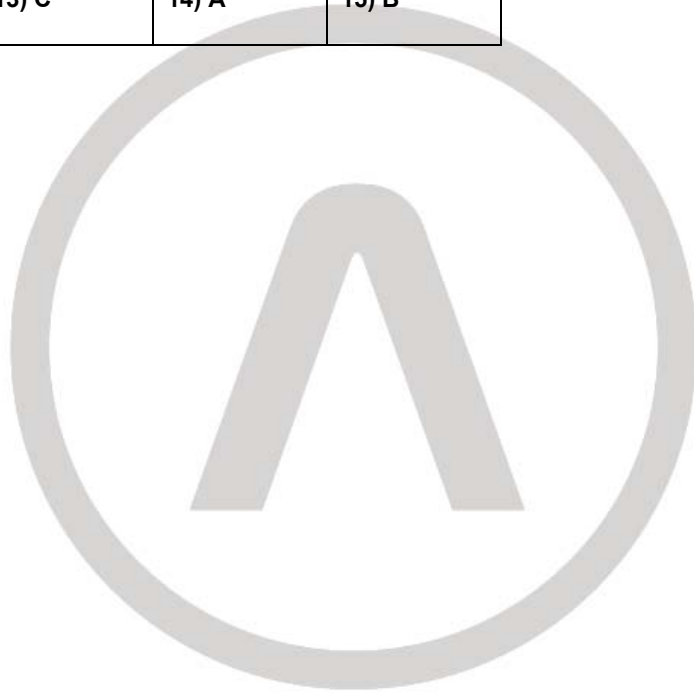

- A) instantly                      B) urgently                      C) crudely  
D) scarcely                      E) reliably

15. **Although the red flames of lithium and strontium appear similar, the light from each can be separated by means of a prism into ---- different colours.**

- A) excessively                      B) distinctly                      C) conventionally  
D) properly                      E) familiarly
